PROFESSIONAL SUMMARY

Dynamic Technical Leader & Full-Stack Software Engineer with **13** years of experience driving backend architecture, large-scale cloud migrations, and system optimizations. Proven track record of scaling enterprise services, integrating LLM/AI capabilities, and leading complex transitions from internal frameworks (Microsoft Substrate) to native Azure. Recognized for stepping into critical leadership gaps to mentor large engineering orgs (15+ engineers), align cross-continental teams, and deliver high-impact enterprise solutions.

CORE PROFICIENCIES

- *Languages:* Java, C# (.NET), Python, JavaScript/TypeScript, SQL, KQL, PHP
- *Cloud Infrastructure:* Azure (Cosmos DB, Azure Redis, Storage, , Service Fabric, ML, AI Foundry), AWS (DynamoDB, SQS, Lambda, S3), Google Cloud Storage, Microsoft Substrate, IaC
- *Architecture & Tools:* Kubernetes, Docker, Kafka, Spring Boot, React, Jenkins, Grafana
- *AI & Concepts:* LLM Integration, Semantic Search, High Availability (HA), Quality of Service (QoS), Distributed Systems Design, Observability, Engineering Leadership

PROFESSIONAL EXPERIENCE

Microsoft | Senior Software Engineer (Acting Lead), People Skills Team | Feb 2025 – Present

- **Architectural Scalability & Migration:** Led the scalability architecture for vast-scale user-side features following the product's General Availability. Architected and executed the critical migration of complex service components from **Microsoft Substrate to native Azure infrastructure**, modernizing the stack and reducing operational overhead.
- **AI/LLM Integration Leadership:** Spearheaded the engineering coordination for LLM-based Skills Inferencing. Aligned technical strategy and execution between US and IDC counterparts, ensuring seamless AI model integration into the core product.
- **System Optimization:** Redesigned and optimized highly distributed scheduled job processing systems to reliably handle exponential user growth and massive data throughput post-GA.
- **Organizational Leadership & Mentorship:** Acted as the technical and operational anchor for an **18-person** IDC organization during a critical leadership transition. Directly mentored and managed workloads for 5 engineers while monitoring 10 others, maintaining team velocity and morale.
- **Quality & Governance:** Served as the mandatory architectural and code reviewer for all IDC team deliverables, establishing strict engineering standards and ensuring zero degradation in deployment quality during organizational shifts.

Microsoft | Senior Software Engineer, Intune Service Modernization | Dec 2022 – Jan 2025

- Engineered the service modernization for **50+ microservices** in Intune, driving the transformation of Stateful services into a robust Stateless architecture.
- Refactored 20+ components across multiple microservices to shift the storage layer from in-memory to a persistent framework, freeing up over **300 TB of memory**.
- Implemented runtime configuration deployment, resulting in improved flexibility and faster updates, while optimizing indexing workflows for better performance and cost savings.
- Enabled the global onboarding of all microservices and the monolith to the new Switzerland region.
- Mentored a team of 5, actively led onboarding sessions for new joiners, facilitated knowledge-sharing workshops, and developed PoCs, including Azure Cognitive Search integrations

Amazon | Software Development Engineer, Seller Registration & KYC | Aug 2021 – Nov 2022

- Architected and executed the decoupling of a monolithic registration web service into modular components such as UI, backend microservices, AWS Lambda, and SQS, improving scalability and maintainability.
- Automated the deployment stack setup for 11 existing services, enabling seamless one-click rollouts to new AWS regions, significantly reducing manual effort and deployment time.
- Designed and implemented the Dormancy Reactivation and Lifetime Verification flow for sellers across multiple products, including Sell-On-Amazon and Seller-Wallet.

Razorpay | Software Engineer, Payment Apps Team | Dec 2019 – Aug 2021

- Developed merchant-facing payment features using Java and GoLang, reducing response times by a factor of seven.
- Spearheaded CI/CD implementation with Spinnaker, Docker, and Kubernetes.

PREVIOUS EXPERIENCE

- **Ivy Comptech – subsidiary of Entain (formerly GVC Holdings) | Senior Software Engineer** (User Flow Game Portal): Optimized KYC workflows and offline user updates, ensuring compliance and system stability (Mar 2019 – Dec 2019).
- **Oracle | Senior Applications Engineer** (Work-Life & GRC): Designed and developed a microservices-based application for on-premise and cloud environments; led development from scratch as a principal team member (Nov 2015 – Mar 2019).
- **Infosys | Systems/Test Engineer**: Automated testing and developed ETL tools, cutting costs and enhancing data integrity in interchange systems (Apr 2013 – Aug 2015).

RECOGNITIONS

- Recognized across multiple teams and services for leading large-scale migrations and driving service modernization with impactful technical expertise.
- Delivered critical components and resolved complex issues, earning recognition from senior Microsoft colleagues

EDUCATION

M.Tech in Software Systems (IoT) | BITS Pilani – Work Integrated | 2024 – 2026

Bachelor of Technology in IT | Biju Patnaik University of Technology, Rourkela | 2008 – 2012
